

This text appears to be a summary or outline of the Quebec Government's Digital Strategy for the years 2024-2028. The strategy aims to enhance the performance and improve the services offered by public administration, particularly in response to the increasing digitalization of daily life.

The strategy includes several key aspects:

1. **Transitioning to cloud computing**: This involves consolidating data centers, optimizing data treatment and storage, and moving towards a cloud-based infrastructure (infonuagique).
2. **Modernization of telecommunication networks**: The government is planning to replace the current Integrated Multimedia Telecommunication Network (RITM) with a new Government Telecommunication Network (RGT). This network will offer advanced services to support projects like the Consolidation of Data Centers and Optimization of Treatment and Storage.
3. **Digitalizing public services**: The strategy aims to digitalize various public services, including healthcare, education, and administrative services, to make them more accessible and efficient.
4. **Cybersecurity and data protection**: Recognizing the importance of security in the digital age, the strategy emphasizes the need for robust cybersecurity measures and data protection. This includes protecting against cyber threats, ensuring data privacy, and promoting digital trust.
5. **Promoting innovation and artificial intelligence (AI)**: The strategy encourages the use of automation and AI to optimize and enhance public services. However, it also emphasizes the need for responsible, secure, and innovative implementation of these technologies.
6. **Collaboration between public organizations**: The success of this digital transformation depends on collaboration between different public organizations. The strategy encourages collective responsibility among all public entities in transforming their operations and demonstrating the positive impact of a digital government to citizens.

In conclusion, this strategy represents an opportunity for the Quebec government to maximize the benefits of digital technologies, improve services, and enhance citizen experiences. The focus on cybersecurity ensures that these digital services will be secure and resilient. Collaboration between public organizations is key to the success of this digital transformation.
